### ***Election/Restrictions***

The response filed on May 3, 2004 to the restriction requirement of 03/01/2004 has been received. Applicant has elected Group I. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP 818.03(a)).

Claims 1-55, and 61-68 were cancelled.

Claims 56-60 and 69-70 are pending and are currently under consideration.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Art Unit: 1642

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 56-60, 69 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rasmussen *et al.* (Electrophoresis, Vol. 13, pages 960-969, 1992).

Rasmussen *et al.* teach an isolated polypeptide comprising a polypeptide sequence that is 99.6% identical to SEQ ID NO:5 (see attached sequence comparison at the end of this action).

It would have been *prima facie* obvious to one of ordinary skill in the art at the time the invention was made to produce isolated antibodies (i.e. polyclonal) to the antigen identified by Rasmussen *et al.* for the purposes of isolating and studying the expressed protein. One of ordinary skill in the art would have been motivated to do so because the production of polyclonal (and or monoclonal antibodies) is standard procedure upon the isolation of antigens. And, although the prior art does not characterize the large subunit or small subunit of SEQ ID NO:5, such polyclonal antibodies would obviously overlap or cross-react with an almost identical antigen.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 1642

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 56-60, and 69-70 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 61,64 of copending Application No. 09/989903 ('903). Although the conflicting claims are not identical, they are not patentably distinct from each other because Claims 61,64 of the '903 application are drawn to isolated monoclonal antibodies or antigen binding fragments thereof that specifically bind to SEQ ID NO:5 which anticipates the genus of isolated antibodies that specifically bind to SEQ ID NO:5 (Claims 56-60, 69) in the pending claims. "A generic claim cannot be allowed to an applicant if the prior art discloses a species falling within the claimed genus." The species in that case will anticipate the genus. In re Slayter, 276 F.2d 408, 411, 125 USPQ 345, 347 (CCPA 1960); In re Gosteli, 872 F.2d 1008, 10 USPQ2d 1614 (Fed. Cir. 1989). Furthermore, it would be obvious to make isolated cells (Claim 70) such as hybridomas for the purpose of generating the monoclonal antibody that specifically binds the protein comprising SEQ ID NO:5 as such cells are conventional in the art for producing monoclonal antibodies.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

No claim is allowed.
